⁽¹⁾Risk measures are calculated from trailing 36-month fund returns relative to the associated benchmarks.

⁽²⁾This is a proprietary Morningstar data point. Morningstar evaluates a mutual fund share class's expense ratio relative to other funds that invest in a similar asset class and have similar distribution characteristics. Within each Comparison Group, a fund share class' expense ratio is ranked against peers using five quintiles. A "Low" rating means fund's expense ratio ranks in the lowest quintile (20th percentile).

⁽³⁾Risk and volatility information is not available for a fund less than 3 years old.
